

Return to Toledo Ballet Guidance After COVID-19 Illness or Exposure For Students, Faculty and Staff

The following guidance should be used to make decisions about “return” to Toledo Ballet:

As of May 4, 2020, guidelines from the Centers for Disease Control and Prevention for people with confirmed or suspected COVID-19 are as follows:

- Students, faculty and staff *with symptoms* who have not been tested (or are waiting for test results) should stay home until at least three full days (72 hours) have passed since recovery (no fever without fever-reducing medications and improvement in respiratory symptoms) AND at least 10 day have passed since the onset of symptoms.
- Students, faculty and staff *with symptoms* who have lab-confirmed COVID-19 should stay home until:
 - At least three full days (72 hours) have passed since recovery (no fever without use of fever-reducing medications and improvement in respiratory symptoms) AND at least 10 days have passed since the onset of symptoms.
 - OR**
 - There is no fever without the use of fever-reducing medications AND improvement in respiratory symptoms AND there are negative results (showing no COVID-19) on at least two consecutive lab tests of respiratory specimens collected and at least 24 hours apart.
- Students, faculty and staff *with symptoms* and a negative lab test for COVID-19 should keep monitoring their symptoms and seek medical advice about staying home and if they need to get tested again.
- Students, faculty and staff *without symptoms* who have lab-confirmed COVID-19 should stay home until:
 - At least 10 days have passed since the date of their first positive test. However, if they develop symptoms in that time-period, they should revert to the criteria for students, faculty and staff with symptoms (above).
 - OR**
 - There are negative results (showing no COVID-19) on at least two consecutive lab tests of respiratory specimens collected at least 24 hours apart.
- If a student is ill, they will not be permitted to return to Toledo Ballet for 14 days, unless a doctor’s note indicates the illness was not COVID19 related and/or provides proof of negative COVID19 test results.
